

The `for_each` meta-argument accepts a set of strings, and creates an instance for each item in that set.

```

resource "azurerm_resource_group" "resource_group" {
  for_each = toset(["rg-em01", "rg-em02", "rg-em03", "rg-em04"])
  name     = each.key
  location = "West Europe"
}

```

- `each.key` — set member corresponding to this instance.
- `each.value` — If a set was provided, this is the same as `each.key`.

Jab hum set of strings ka upyog karte hai tab `each.key` aur `each.value` dono ek hi hota hai, jo marzi use karo, koi farak nahi padta....

ForEach + List

Input

`rg_names = ["rg1", "rg2", "rg3", "rg4", "rg4"] - LIST`

```

resource "azurerm_resource_group" "resource_group" {
  for_each = toset(var_rg_names) - MAP/SET OF STRINGS
  name     = each.key
  location = "West Europe"
}

```

Delete wala problem solve...

5 RG ek hi region me bana sakte hai.. matlab alg alg region me nahi bn paega rg...

ForEach + Map

RG ALG ALG REGION ME BANA NA HAI.

Ye JSON hai..

```

"rg_names": {
  "rohi": "sabri"
  "chawal": "dal"
  "rajma": "chawal"
  "kadi": "chawal"
}

```

Input

`rg_names` variable hai

`rg_names = {`

`"rg1" = "WestEurope"`

`"rg2" = "CentralIndia"`

`"rg3" = "CanadaCentral"`

`}`

```

resource "azurerm_resource_group" "resource_group" {
  for_each = var_rg_names : ["rg1" = "CentralIndia"]
  name     = each.key - rg1
  location = each.value - WestEurope
}

```

Input Alg tarike wala

`rg_names` variable hai uske andar me map me hum log ek key hai `rg_ko_name` uska value portal p `rg1` hona chahiye...

`rg_names = {`

`"rg_ko_name" = "rg1"`

`"rg_ko_location" = "WestEurope"`

`}`

```

resource "azurerm_resource_group" "resource_group" {
  for_each = var_rg_names : ["rg1" = "CentralIndia"]
  name     = each.key - rg1
  location = each.value - WestEurope
}

```

List Kya hai?

```
["dal", "chawal", "sabji", "roti"]
```

MAP Kya hai?

```

{
  key = value
  key = value
  key = value
}

"monu" = "ladka hai" - string value
"tonu" = 30 - number value
"sisu" = true - bool value
"sisu" = ["one", "two"] - list value

```

KEY IS ALWAYS A STRING

VALUE KUCH BHI HO SAKTI HAI

```

resource "azurerm_resource_group" "rgs" {
  for_each = {
    "rg1" = "West Europe"
    "rg2" = "Central India"
    "rg3" = "Canada Central"
    "rg4" = "East US"
  }
  name     = each.key
  location = each.value
}

```

```

resource "azurerm_resource_group" "rgs" {
  for_each = var.rgs
  name     = each.key
  location = each.value
}

```

```

START
rgs = {
  "rg1" = {
    name = "rg-tutu"
    location = "West Europe"
  }
  "rg2" = {
    name = "rg-lulu"
    location = "Canada Central"
  }
  "rg3" = {
    name = "rg-kuku"
    location = "Central India"
  }
}
END

```

1. rgs ho gya variable.
2. rg me dal rahe hai nested map.
3. ye nested map hota hai map ke andar map
4. map kya hota hai

```

{
  key = value
  key = value
  key = value
}

```
